Run, Repair, or Replace?

Structural Integrity can help you decide.

Life at a nuclear plant is a challenge, even on the good days. And the pressure really mounts when important decisions that impact plant and equipment reliability must be made in the face of aging equipment, tight budgets and a ticking clock.

Sound run/repair/replace decisions – including modifications – can save your company millions of dollars over time and ensure plant and equipment reliability. But the best path is not always clear. Unverified assumptions and emotions can cloud the decision-making process. Structural Integrity Associates can provide accurate independent, assessments to help you choose the best path for your plant.

Our integrated approach to financial risk optimization brings engineering and finance together to provide a realistic view of risk. This unique approach allows us to identify feasible alternatives for resolution, quantify the chances and consequences of component failure, and determine the best timing for maintenance.

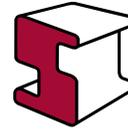

We can provide answers related to:

- Damage mechanisms, susceptibility and options for mitigation and repair
- Consequences (forced outage, derate) of a failure event
- Equipment reliability/remaining life
- Identification and evaluation of viable options
- Proper timing and course of action to avoid exacerbating damage and to make the most of available budgets
- Safety concerns

We bring 30 years of nuclear experience – and lessons learned from around the world – to shed light on and help provide guidance for your most challenging decisions. When you need the facts – fast – turn to the experts at Structural Integrity.

Call **1-877-4SI-POWER** or visit our website at www.structint.com/Top10 to learn how our run/repair/replace services can save your company money – and maybe save you some sleepless nights spent worrying about these kinds of decisions.

You generate the power. We'll generate the solutions.
